Title boundaries were not marked at the time of survey and have been determined from the original survey plan dimensions only. For accurate locations of boundaries, an identification survey is recommended.  
 Notes:  
 The proposed services have been compiled from a combination of field survey and design. The accuracy of service alignments shown on this plan may vary depending on the accuracy of the data. The liability should always be undertaken to verify the exact position prior to construction. Whilst all care has been taken to represent the location of underground services, there are no warranties made.
